

CONNECTING TO ONE BED (does not include KING or SPLIT KING bed sizes)

STEP 1

Hold Lightbulb button for 3 seconds to start searching.

[Remote only detects 1 bed]

The remote will only detect one control box and automatically connect. Connection is now complete and will be taken back to the home screen.

STEP 2

[Remote detects multiple control boxes, this usually means you have more than one bed in your house]

Select Other

STEP 3

The screen now asks if you are connecting to only 1 bed. Select YES

STEP 4

There should now be a list of available control boxes that you can connect to. Scroll using any of the up/down buttons H/T/F. Select desired control box by single-pressing the lightbulb button. Once the single bed is selected, you will then be taken back to the home screen.

KING only

STEP 1

Hold Lightbulb button for 3 seconds to start searching.

STEP 2A

Select KING

If the remote detects only 2 control boxes then the remote will automatically connect to both control boxes on your bed.

STEP 2B

If the remote detects more than 2 control boxes, there should now be a list of available control boxes that you can connect to. (this usually means you have more than one bed in your house) Scroll using any of the up/down buttons H/T/F. Select the 2 desired control boxes by single-pressing the lightbulb button.

SPLIT KING only

STEP 1

Hold Lightbulb button for 3 seconds to start searching.

STEP 2

Select SPLIT KING

When you choose SPLIT KING, will be asked if want to connect to both sides of bed? Select YES or NO

STEP 3A

Select YES

If the remote detects only 2 control boxes then the remote will automatically connect to both sides of your bed.

If the remote detects more than 2 control boxes, there should now be a list of available control boxes that you can connect to. (this usually means you have more than one bed in your house) Scroll using any of the up/down buttons H/T/F. Select the 2 desired control boxes by single-pressing the lightbulb button. You will then be taken back to the home screen.

STEP 3B

Select NO

There should now be a list of available control boxes that you can connect to. Select the desired side of the bed you want to connect to by single-pressing the lightbulb button. You will then be taken back to the home screen.

CONNECTING TO TWO SEPARATE BEDS

STEP 1

Hold Lightbulb button for 3 seconds to start searching.

STEP 2

Select Other

STEP 3

The screen now asks if you are connecting to only 1 bed. Select NO.

STEP 4

There should now be a list of available control boxes that you can connect to, select the beds

you wish to connect to [remote can show up to 20 beds] Select any two beds you wish to connect by single-pressing the lightbulb button. After selecting 2 beds, the remote will send the user to the home screen.

FOR PAIRING TWO REMOTES TO EACH SIDE OF THE BED

(for KING, SPLIT KING or two beds)

Our remote and Bluetooth technology allows for pairing/connecting two remotes with each side of the bed so each remote can control both sides of bed.

Pair/Connect one remote with both sides of the bed, then wait for that remote to enter sleep mode and pair/connect the other remote with both sides of bed. If two remotes are connected to one bed, in order to actively use one of the remotes to control the bed you must make sure the other remote is in sleep mode. Waking up other remote will result in a disconnection from the control unit and the remote will show "No Bed Paired".
